

# Superior design, inside and out.

## Patented Corrugation

Provides layers of protection with semi-rigid, corrugated copper alloy and a fire-retardant jacket

## Mitigated Risk of Contamination

Minimizes hot work, dust and construction that can contaminate sterile healthcare environments

## Long, Continuous Lengths

Eliminates brazed sections and elbows with long, bendable lengths that can be adjusted as needed

## Ease of Installation

Cuts installation time dramatically with minimal hot work and just two connections

## Reduced Cost

Installs quickly and easily, even along parallel systems, to significantly reduce labor costs

## Ideal for Healthcare

Offers strength, durability, seismic-resistance, and layout flexibility for all types of medical gases

## Ready to make the switch?

## Innovation from end to end.

### Introducing MediTrac®

The world's first corrugated medical gas tubing putting healthcare facilities ahead of the curve.

# Ingenuity on a roll.

Designed to replace traditional copper tubing, MediTrac® revolutionizes gas distribution with patented corrugated medical tubing (CMT) in long, continuous lengths for faster, safer, easier installation. No elbow joints or brazed sections. No extensive hot work or maintenance to repair leak points. Made from a unique copper alloy and corrugated to bend around existing structures and systems, MediTrac represents the next generation of medical gas distribution.

## MediTrac for Every Need

- Medical
- Dental
- Ambulatory
- Rehabilitation
- Clinics
- Long-term care

UL-tested and developed for healthcare use, MediTrac offers multiple layers of protection.

## Installation as easy as 1, 2, 3.

Ideal for new, renovated and retrofitted facilities, MediTrac's inherent flexibility makes medical tubing installation a snap.

- 1 Roll out pre-cleaned MediTrac, and connect the axial swaged, quick-assembly fittings.
- 2 Adjust the CMT to fit the facility layout, using existing copper supports if desired.
- 3 Tie in to the gas delivery system. (It's that simple.)

## Versatility around every corner.

Sized 1/2" to 2" and designed to last the lifetime of a facility, MediTrac can be used with all K, L and DWV medical tubing for a full range of gasses:

- Medical air
- Oxygen
- Nitrogen
- Nitrous oxide
- Carbon dioxide
- Medical vacuum

## Safety that goes to great lengths.

Because it comes in continuous lengths, MediTrac virtually eliminates the need for hot work that can cause leaks, contamination, safety issues, and high labor costs. Fittings are rated to 1,000°F, and the CMT includes a fire-retardant jacket for added strength and reliability. High-performance, UL-1365 tested, MediTrac fully complies with all 2018 NFPA 99 and ASTM E84 codes and is backed by OmegaFlex®, a trusted, global leader in metal hose engineering.
